I'm on a call but took a quick look at the sediment TWG-roads ppt. It looks on target to me. Slide 26 1st bullet...good benchmark for using "built" I suggest saying "built, operated and maintained..."

Idea of "even flow progress" on category of roads not meeting current FPA implied....suggest making it more explicit so forest landowners make steady progress on addressing pre-FPA road issues during a several decade period. A timeline should be included...I may have missed it. Several decades could be appropriate

Broadscale RMAP effectiveness monitoring of private forest roads in WA State show that ~ 90% disconnection has been achieved where RMAP implemented. Something in the no more than 10% connected could be a reasonable target based on field data.

Great work Josh. Will there be something similar for landslides/sediment? Dave
